Monitoring Data Record

Project Title: <u>U-2524AC Site 1</u>	COE Action ID: 200321137						
Stream Name: <u>UT No. 9 to Bull Run</u>							
City, County and other Location Information	on: Greensboro Western Loop, Guilford Co.						
Sta. 57+80 Lt. to 58+57 RtL-							
Date Construction Completed: Water was turned into the stream on June 2005 and planted in							
March 2005.	Monitoring Year: (3) of 5						
Ecoregion:	8 digit HUC unit <u>03030002</u>						
USGS Quad Name and Coordinates:							
Rosgen Classification: Proposed reach is a E5 stream type							
	ural: <u>Urban</u> Watershed Size:						
Monitoring DATA collected by: M. Green	<u>& J. Young</u> Date: <u>1/16/08</u>						
Applicant Information:							
Name: NCDOT Roadside Environmental Unit							
Address: 1425 Rock Quarry Road Raleigh, NC 27610							
	Email address: mlgreen@dot.state.nc.us						
Consultant Information:							
Name:							
Address:							
Telephone Number: Email address:							
Project Status: <u>Complete</u>							
-							
Manitaring Lavel required by COF and	DWO (404 pormit/401 Cort.): Laval (1)2 3						
Monitoring Level 1 requires completion							
Monitoring Level 1 requires completion	of Section 1, Section 2 and Section 3						
Monitoring Level 1 requires completion Permit States : NCDOT shall perform the	of Section 1, Section 2 and Section 3 following components of Level I monitoring twice						
Monitoring Level 1 requires completion Permit States : NCDOT shall perform the each year for the 5 year monitoring period	of Section 1, Section 2 and Section 3 following components of Level I monitoring twice (summer and winter): Reference photos, plant

Attach plan sheet indicating reference photos. Identify specific problem areas (missing, stressed, damaged or dead plantings): Estimated causes, and proposed/required remedial action: ADDITIONAL COMMENTS: Vegetation is dormant at this time. Hardwood vegetation noted onsite includes: green ash, tulip poplar, river birch, black willow, silky dogwood, willow oak, sweetgum, and sycamore. Other vegetation onsite included: Juncus sp., fennel, goldenrod, sedge, and ragweed.

Section 2. PLANT SURVIVAL

If required to complete Level 1 and Level 2 monitoring only stop here; otherwise, complete section 3.

Section 3. CHANNEL STABILITY

Visual Inspection: The entire stream project as well as each in-stream structure and bank stabilization/revetment structure must be evaluated and problems addressed.

Report on the visual inspection of channel stability. <u>Physical measurements of channel stability/morphology will not be required.</u> Include a discussion of any deviations from as-built and an evaluation of the significance of these deviations and whether they are indicative of a stabilizing or destabilizing situation.

This is the Year 3 winter evaluation of this stream relocation. The stream is stabilized at this time. Some minor bank erosion still exist below a crossvane (Photo Point #3 Downstream) but is not affecting the overall stability of the stream relocation. NCDOT will continue to monitor this stream relocation.

erosion	erosion				
present?					

NOTE: Attach separate narrative sheets to each monitoring report describing/discussing the overall monitoring results. Include the identification of specific problem areas/channel failures, estimated cause and proposed/required remedial action. This should include a brief discussion of any parameter that has changed significantly from as-built.
